

# Open Source Web Design Programs

*di Paolo Franzese*

Perchè acquistare i programmi quando si possono trovare gratis? Spesso pensiamo che il **software open source** non sia buono per un lavoro professionale invece eccovi questa lista:

1. [Nvu](#): An open-source web authoring system to rival FrontPage and Dreamweaver. (Linux, Windows, and Mac)
2. [Cssed](#): A CSS editor featuring auto completion, syntax highlighting and validation. (C, C++) (Linux)
3. [Quanta Plus](#): A top-notch HTML editor and web development for the K Desktop Environment.
4. [Bluefish](#): An HTML editor for programmers written using GTK, designed to save the experienced webmaster some keystrokes. (C) (GNU/Linux, Unix)
5. [GIMPShop](#): The open source replacement for Photoshop. (Mac, Linux, and Windows)
6. [Inkscape](#): The vector graphics application which may spell the end for Adobe Illustrator.

Suggeritemi altri programmi nei post.
