Installed on imaginepaolo.com

Following code was pasted into HTML

```
<script src="https://linked.chat/web/████████" async></script>
```

e incollandolo nel nostro sito.

Chat pronta per tutti!

The screenshot shows a live chat window titled "linkedchat-support". The timestamp is November 12th. The conversation is as follows:

c7u9 BOT 15:20 ok so basically this live chat option is available for both logged in & visitors (not logged in). And if we've only want to enable live chat for either one, it's possible too?

stan 15:20 correct

as I said you can insert chat script into page on your server side depends on some condition like paid or not paid user

c7u9 BOT 15:21 ok, and this is applicable to both telegram & slack

url
<https://linked.chat/setup>

location
Malaysia, Petaling Jaya

browser
Chrome 46.0.2490.80, English

OS
Windows 8.1, Desktop

stan 15:22 right

you can see on setup page that you create chat in dashboard and then connect it to Telegram and Slack
for example now I reply to you from Slack
and before I replied from Telegram
you can use both apps simultaneously

c7u9 BOT 15:23 so for me to test this, I'll have to test this live on my website?

stan 15:24 it is not necessary

you can create simple html page and insert script into it

c7u9 BOT 15:24 great! that's it for now, thanks :)

will this chat be saved once i close this page?

The mobile phone screen shows a Telegram chat with the title "LinkedChat support". The timestamp is 15:35. The conversation is as follows:

LinkedChatBot c7u9: so what role does LinkedChat play here if I'm using a third party app ie. Telegram / Slack?

It gives you chat for your website and forwards messages between your web chat and Telegram/ Slack

This solution is convenient if you already use Telegram or Slack and don't want to use another chat app

For example I use Telegram to chat with friends

and now can reply to you from Telegram as well

LinkedChatBot c7u9: ok
